

Connector brief — warm intro

Use: Forward to introducers who need 90 seconds of context.

Who

ASF — founder operating multiple technology businesses (trust/field, commerce, AI runtime spine, foundation, future enterprise knowledge product).

What we need

Intro type	Why
B2B pilot (commerce)	VIRLUX staging → paying pilot
Regtech / ops platform	TrustField production demo
Multi-company operator advisor	HoldCo discipline
App Store growth	Only if intro is for Cursor OS Pro (separate doc)

What we don't need

- Generic “AI tooling” investors with no B2B path
- Meetings about smoke tests or LAN pairing
- Introducers who conflate internal ops with consumer App Store app

Proof point (one sentence)

Founder can start the same Mac production pipeline from a phone on cellular; focus now is **customer-visible URLs and pilots per company**.

Materials to attach

- ONE_PAGER.md
- ROADMAP.md (90-day section)

Suggested intro email (copy)

Subject: Intro — ASF / portfolio ops + VIRLUX pilot path

I'd like to introduce ASF, who runs several tech businesses on one governance stack and has proven remote production control from mobile (including off-network). They're not raising on “connectivity tests” — they're focused on near-term customer milestones, starting with VIRLUX staging → pilot and TrustField production demo.

Attached: one-pager + 90-day roadmap. Happy to do a 25-min call if {pilot/customer/advisor} fit makes sense.

After intro: ASF uses DEMO_SCRIPT.md and ends on **business artifact**, not wire logs.
